

Semiconductor Manufacturer – Arizona

Opportunity

A semiconductor manufacturer location in Arizona partnered with Evolved EV Charging Solutions to implement workplace EV charging capabilities for their employees. With almost 30,000 active employees, their existing EV charging ports were not keeping up with the demand from their workforce.

Evolved's team stepped in to bridge the gap and double their charger capacity on-site.

Solution

Evolved's team evaluated the property capabilities and determined a path forward to bring a new set of chargers to life.

In total, the Evolved team created a 120 foot underground bore, and utilized some existing conduit, connecting the new chargers to a nearby Christy box, saving thousands in construction costs and weeks of installation time.

Our team successfully added 12, Level 2 ports to their existing network, totaling 24 ports in total for the workplace.
